

When filling out this worksheet, consider what project uncertainties exist at macro, meso, and micro levels. The aim is to acknowledge the uncertainties, rather than come up with solutions. Consider these uncertainties when communicating with outside stakeholders and affected users.

### Macro uncertainties

### Meso uncertainties

### Micro uncertainties

Consider whether these uncertainties are social, technical, or socio-technical.

- **Social Uncertainties:** Unpredictability arising from factors like cultural differences, political changes, and economic fluctuations, which impact decision-making processes and societal outcomes.
- **Socio-Technical Uncertainties:** Technology with societal norms and practices.
- **Technical Uncertainties:** Relate to the unknowns and unpredictabilities inherent in technological systems and processes, including factors like design limitations, and system failures.

**Social  
uncertainties**

**Socio-technical  
uncertainties**

**Technical  
uncertainties**
